No Problem.

I think it happened because it was already **late at night**, when you wrote this.

So actually YOU were **through** .... thats why..... a so-called "**Freudsche Fehlleistung**"  
("Lassen Sie mich **Arzt**, ich bin durch...")

Also i thought maybe it is not a good idea to send her all the little **mistakes** she makes on her website.  
because she will slowly start to **hate** you, because of all the **negativity**.....  
it will even increase her (genetically inherited) **swearing**.... she will soon consider you a fucking "**Erbsenzähler**" (pea-counter) .....

but always i think when the **enemy** reads this, they will say "oh she was at **Oxford**, but even cannot write such simple words correctly"...  
"...Probably she was rather at **Oxfam-University** in the deepest bushes of **Africa**, learning to count and write with the other kids..."  
so we should not give them **fodder**... like "Oh she gets more an' more **odder**" ..... "they should give psychopills **a lot her**"

So i will furthermore **keep sending** all mistakes i see (to anybody...anytime....anywhere... **anyhow**),  
bearing the fate of the **painstaking** (pain for whom?) **faultfinder**.....  
supporting one of the most important **fighter-girls** on the planet at the moment....

but all for a greater goal.... actually the greatest goal:  
an internet with 100% correct **right-writing**....  
so you can call me "**The DUDEN-Dude**"

You can also regularly scan or photograph your logbook to create a digital copy. However, it is of utmost importance that you also generate hard-copy evidence in your own handwriting in logbooks in addition to digital data. That is because your handwriting is very hard to forge and your logbook cannot be hacked remotely by the intelligence agencies. Don't worry if a book is stolen, it can be requested back as the Intelligence Agencies collect items and rarely **through** something away.
