Cover-Up of Crimes Against Humanity

1 message

Dear Dr. LaPorte,

I am writing to inform you that you were quoted in the Chicago Sun-Times with what was presented as your "expert opinion" but which, I'm sad to say, was not just mere off-the-cuff blithering but in fact aiding and abetting the cover-up of crimes against humanity, see here:

<https://chicago.suntimes.com/columnists/targeted-individuals-surveillance-government-paranoid/>

It is an undeniable and to journalists well-known fact that thousands of innocent Americans and Europeans have been entered into Nazi-style non-consensual human experimentation involving the non-consensual implanting of their brain and body, round the clock assault with Directed Energy Weapons, terror stalking, harassment, housebreaking and bio-warfare (among a plethora of other abuses).

These crimes are not just real, they have been well documented over the past 3 decades. What has also been documented is that diagnoses of, so called, "schizophrenia" and "paranoia" are unscientific at best and a criminal cover-up of crimes against humanity along with a fraudulent conduit into brain mutilation with neuro-toxins (aka. "psycho-pharmaca") in many cases.

Should you belong to that rare breed of psychologist who lived the past 3 decades in the jungles of Borneo or behind the moon, such that you have not been made aware of these facts, then I invite you to inform yourself by contacting Dr. Hildegard Staninger who has decades of experience tracking down non-consensual implants and the criminals who have licensed the radio-frequencies that are communicating with those non-consensual implants in order to commit remote-control torture of victims.

Typical victim torture involves the broadcasting of audio (tones and conversation) to victims' covert non-consensual ear implants, which is often misdiagnosed by dim-witted psychologists and psychiatrists as "schizophrenia" or "delusions". This is typically not anchored in fact or scientific investigation, but rather in those pseudo-scientific doctor-wannabes' utter cluelessness when it comes to maths, physics, engineering and weapons technology.

Most psychologists and psychiatrists can't wrap their challenged mind around the simple fact that brain damage or illnesses cannot create human voices and perfect grammar in the ear canal or the brain of an individual (the reasons for that have to do with the Second Law of Thermodynamics - but that's for another day). It thus follows that those conversations that people report as hearing are actual conversations. In the cases I looked at, I found radio-frequency emissions coming out of the ear area and the neck or back of head of the victims. This is consistent with implanting with microchip technology and military communication devices. Victims often have laser surgery scars in those areas that prove that something was operated into their bodies.

If you would like to see some of the implants found in victims, get hold of the book "Global Brain Chip and Mesogens" by Dr. Hildegard Staninger, see here:
<https://www.amazon.com/Global-Mesogens-Hildegard-Staninger-Riet-1/dp/1498492002/>

Finally, if I may, I'd most humbly advise refraining from smearing the victims of a 21st century global holocaust as "schizophrenic" or "delusional". It might land you a prime seat alongside modern day Nazi war criminals from the military, Intel Agencies, hospitals and universities who are conducting these criminal human attrition experiments that have the total maiming and the death of the victims as their goal.

Best wishes and good luck with the long-term consequences of Neil Steinberg's article given the upcoming court cases,

Dr. Katherine Horton
